

Course title: Environmental Control Management

Course Description:

This course expands the horizon of Environmental Compliance in relation to the relative legislations, laws and standards. Course will address in detail on the impacts of environmental pollutions to soil, air and marine environment and how to eliminate, minimize and mitigate such impacts, both from authority as well as operating industries perspectives. The objective is to operate in a sound environmental acceptance – protecting the environment and public health, being effective and efficient from operational perspective, in addition to being cost-effective in operations.

Course will also include an in-session workshop.

Course Learning Outcome

- Local, Federal and International Laws and Regulations, and United Nation's Sustainable Development Goals
- Pollution Control System and Technologies
